DETAILED ACTION

Drawings

1. Figures 1-3 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 3-6, 9, 10, 12-16 and 20 recites the limitation "the memory controller". There is insufficient antecedent basis for this limitation in the claim. Applicant needs to recite a memory controller in the independent claims 1 and 11 in order to provide proper antecedent basis for the dependent claims.

Allowable Subject Matter

4. Claims 1, 2, 7, 8, 11 and 17-19 are allowed.

5. Claims 3-6, 9, 10, 12-16 and 20 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter:

The prior art made of record fails to anticipate or make obvious the claimed invention. Specially, the prior art fails to teach or suggest, in combination with the remaining steps, a method for accessing data by a plurality of read requests according to a predetermining request sequence, comprising the steps of reordering the read requests according to pages in the memory device into a second request sequence for each of said request groups as recited in claim 1 and similarly recited in claim 11.
